LIPOPLASTY

Noninvasive Lipoplasty & Skin Tightening

LipoTron is the future of fat reduction. Imagine being able to melt fat away without dieting, strenuous exercise, injections or surgery in the comfort of a spa.

How does it Work?

LipoTron uses radio frequency to specifically target fat cells. The treatment increases your body's core temperature to a point of dissolving fat cells, without causing damage to other internal organs. It is the first technology to melt the unhealthy and dangerous fat linked to heart disease and diabetes. CT scans; body circumference and weight measurements have confirmed that LipoTron results in the loss of 2-3 inches and 10 lbs of weight in just 6 weeks for most patients. It causes the disruption of fat cell membranes, thus causing the fatty content to leak out into the interstitial tissue. The fat is then absorbed by the lymphatic system and eventually eliminated naturally via the urine and feces. The natural elimination is one of the features distinguishing LipoTron from the other invasive and minimally invasive techniques, such as Smart Lipo, Vaser and liposuction. Eliminating the fat, since it is not vacuumed or sucked out, requires the patients' participation. The patient has to do some mild form of exercise such as walking _ hour three times a week to keep the lymphatic and circulatory system moving, drink lots of water to aid in elimination and use a bowel prep to facilitate fat loss naturally.

Furthermore, invasive techniques remove or kill the fat cells, making it difficult to gain fat back in the treated area. However, if one "falls off the wagon" with healthy lifestyle habits, the weight will be gained and will do so in other areas. This often leads to a disproportionate and funny looking figure. Since the major mechanism of action of LipoTron is to reduce fat cell volume and not remove or kill the fat cell, weight gain can occur proportionately if weight gain should recur.

Question & Answer

Q. What is LipoTron?

A. The LipoTron is a non-invasive aesthetic device that tightens skin, recon tours the face and body, reduces cellulite. This safe treatment works for all the skin types and colors, and offers solutions to the inevitable problems of weigh gain and aging skin.

Q. What is different between Thermage or Aluma Skin Renewal and LipoTron?

A. Their devices use high heat (65° C or more) for contraction of collagen but LipoTron uses low tissue heat between 39-42. Their application is limited to skin tightening.

Q. What is LipoTron Application?
